

Hoist with adapted alert ★

Step 1 – Before attaching the sling to the hoist

The adult positions themselves in front of the learner and says the learner's name to begin the interaction.

- With the pads of the fingers of the right hand, provide a gentle, sustained touch in a circular motion on the left shoulder while saying the learner's name again.
- Leaving the right hand on the learner's left shoulder, the adult places their left hand on the learner's right shoulder.
- Move both hands slowly from the top of the upper arms stopping under the elbows (the elbows are cupped in the adult's hands).
- Provide a sustained touch for two seconds in a gentle raised motion then provide a gentle swaying motion from left to right and repeat.

Step 2 – Attach the sling to the hoist

Repeat the actions at Step 1. Provide additional support as required to transfer the learner safely.

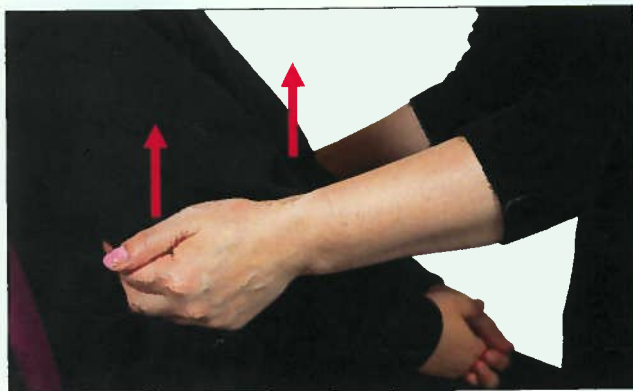

Elbows cupped in adult's hands
(sustain the touch for two seconds)

Gentle swaying motion
