

Week beginning 18.05.20

- LO: To describe the key characteristics of unusual living things from around the world

		
Hydnellum Peckii	Blue dragon	Saiga antelope
		
Dumbo octopus	Bearded vulture	American pitcher plant

Activity 1: For each picture you will need to find out which country it originates. Then, you will need to carry out some research to enable you to write a scientific description to match each.

Activity 2: We are always discovering new living things. There are estimated to be 8.7 million different forms of life on Earth and so far we have discovered about 14% of these! Meaning 86% of the living world is yet to be discovered. Can you find out any information about any new recent discoveries?

Activity 3: Choose one of the living things from activity 1 and create your own fact file. Try and include some information about its habitat, diet, interesting facts and other information you might come across.
