Can a Crab's Shell Get Bigger?

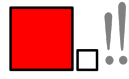

A crab's shell cannot grow or stretch. When a crab gets too

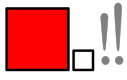

big for its shell, it will climb out of it and make a new

1

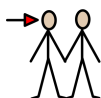

one.

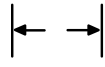

What Is the Biggest Crab?

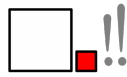

The biggest crab in the world is the Japanese spider crab.

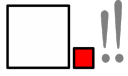

4

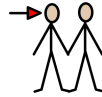

They can be up to 4 metres wide!

What Is the Smallest Crab?

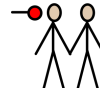

The smallest crab in the world

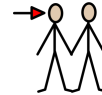

is the pea crab. They are only up to 1cm wide.

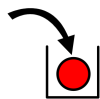

Fun Facts!

• Crab's eyes are on sticks on top of their head.

• Most crabs have flat bodies. This means that they

can squeeze into very small spaces.

• A group of crabs is called a cast.
