

Construction Challenge!

Can you design, adapt and improve on making a model? This can be made from toys such as Lego, wooden blocks, or from household items like plastic cups and kitchen rolls. When constructing your model, think about how it can be improved. You may like to mix different toys and materials together to create your desired effect. How many different types of models can you build? How tall can you build a tower before it falls down? Here are some examples to support your ideas, but remember to use your imagination too!

We look forward to seeing your models!
